

# Innovative Access Control Solutions for Securing Today's Campus

ASSA ABLOY

Presented by **Christopher M. Kopach**, CEP, AVP, FM UA, APPA President;  
**Jeremy Saline**, Director of Business Development, ASSA ABLOY;  
**Jim Primovic**, Sales Director Campus EAC, ASSA ABLOY

The global leader in door opening solutions

## Learning Outcomes

- Understanding of the cost differences between legacy access control and innovative technologies such as wireless and IP
- Review the process of selecting application specific access control solutions that meet your campus budget and security needs
- Discuss how campus investments in access control can support future changes in credential technology

## Thinking of deploying access control on campus and not sure what solution best fits your security and financial needs?

This presentation begins with a review of cost differences between legacy access control and today's innovative technologies such as wireless and IP based solutions (WiFi & PoE). Discussion progresses to reviewing the process of selecting application specific access control that can meet your campus budget and security needs because not every door is created equal and the desired operation of each door can dictate the solution that best fits that particular opening. The presentation then shifts focus to strategic thinking related to changing campus card credentials and the impact that decision making can have on selecting the right access control solution. Upon conclusion of the formal presentation, a Q&A discussion will be encouraged so that all audience members can ask questions specific to their campus access control needs.

APPA Webinar Series  
March 29<sup>th</sup>, 2018

Please join *Jeremy Saline*, Director Business Development and *Jim Primovic*, Sales Director Campus EAC from ASSA ABLOY as they review the considerable differences between today's legacy access control, wireless and IP-based solutions.
