

The University of Alabama Custodial Services Department provides daily service to 12.5 million square feet of academic, residential, medical, and athletic building space.

The department delivers a wide range of services for campus buildings and University properties. The scope of services ranges from routine, general cleaning to specialty services such as carpet cleaning, hard surface restorations, and special event support.

The Emergency Response Project Team evolved out of a need for swift response to floods and other emergencies requiring immediate attention. The Team is deployed as a rapid reaction solution during times requiring expedited emergency services. When not utilized in this emergency capacity, the team serves as a primary resource for special projects including carpet extraction, hard surface floor care and pressure washing.

While the team initially launched as a special projects group, this mission dynamic recently changed as new needs arose which resulted in retooling for increased functionality and staffing. Since then, the team has expanded to encompass a full range of emergency services.

Currently the Emergency Response Project Team's project assignments have grown exponentially to include emergency flood response, dry-down procedures, storm shelter watch, winter storm watch, equipment assessment, equipment transport, and even minor equipment repair campus-wide.
